

PRODUCT SOLUTION DESCRIPTION

The 8e6 Professional Edition offers high-performance, enterprise-level filtering with the R3000 Internet Filter. An appliance optimized for speed and scalability, the R3000 provides 100+ categories and millions of Web sites in the M86 Security Database. Deployed in "pass-by" or transparent mode, the R3000 sits outside the flow of network traffic to "watch" rather than "stop and check", delivering unmatched network compatibility and performance. The 8e6 Professional Edition comes with the Enterprise Reporter—the only dedicated appliance to process and display Internet filtering usage logs without compromising filtering speed or performance, or impacting network functions. Included is the 8e6 Threat Analysis Reporter, designed to deliver up-to-the-minute graphical snapshots of Internet traffic, supported by real-time management tools to identify and control user-generated Web threats and excessive Bandwidth usage.

MailMarshal protects against all email threats including blocking spam, phishing, viruses, Trojans, worms, Denial-of-Service attacks, Directory Harvesting attacks and spoofed messages. Achieves a consistent 99.5% spam catch with <0.001% false positives with no special tuning or ongoing administration. MailMarshal enforces any policy based on virtually any message attribute. MailMarshal protects all incoming, outgoing and internal email.

M86 Security Labs is a group of M86 Security analysts who constantly monitor and respond to Internet security threats. Security Labs provides a service to M86 Security customers as part of standard product maintenance. The service includes updates to M86 Security's unique, proprietary anti-spam technology, SpamCensor. Security Labs analyzes spam, phishing and Internet security trends and provides frequent automated updates to M86 Security customers. Security Labs also provides "Zero Day" security protection to secure M86 Security customers against new email and virus exploits the day they emerge.

EXPERTISE/DIFFERENTIATORS

- Advanced logging, forensic analysis, drill-down reporting and archiving
- Restricting access to unwanted web sites, malware, specific content type, Instant Messaging(IM), Peer to Peer(P2P) and news-groups
- Real-time monitoring of Internet threats
- Intelligent Footprint Technology uses signature/pattern based filtering for Web-based proxies, IM and P2P
- Locks down workstation when policy violation thresholds are exceeded
